

Diesel Water Pump Generator Set

This diesel water pump generator set is designed for high-performance water pumping applications. It features a robust diesel engine coupled with a centrifugal water pump, providing reliable and efficient water transfer.

Overview

High-Performance Diesel Water Pump System

This diesel water pump generator set is engineered for demanding water transfer tasks, combining a robust diesel engine with a high-efficiency centrifugal pump. Designed for reliability and ease of operation, it features an integrated control panel for precise monitoring of engine parameters and pump performance. This versatile system is an ideal solution for critical applications including large-scale irrigation, industrial dewatering, and emergency fire suppression.

Technical Specifications

Engine Type	Diesel
Pump Type	Centrifugal

Features

Control System

- Engine parameter monitoring
- Pump performance tracking
- Integrated control panel

Primary Applications	Irrigation, Dewatering, Fire Suppression
