

Diesel Water Pump Generator

This portable diesel generator is designed for water pumping applications. It features a robust protective frame, air-cooled diesel engine, and a centrifugal water pump.

Overview

High-Performance Diesel Water Pump

This portable diesel water pump generator is engineered for demanding water transfer applications, including agricultural irrigation and construction site dewatering. Built with a robust protective frame and an efficient air-cooled diesel engine, it ensures reliable operation in challenging environments. The unit features a self-priming centrifugal pump design, making it an essential tool for effective water management.

Technical Specifications

Engine Cooling System	Air Cooled
Fuel Type	Diesel

Features

Key Features	Portable, Self-priming, Robust Frame, Centrifugal Pump
--------------	--

Applications

Common Use Cases

- Agricultural Irrigation
- Dewatering
- General Water Transfer
