

Diesel Water Transfer Pump

This diesel displacement pump is a robust and reliable solution for various water transfer applications. Featuring a powerful diesel engine, it provides efficient and consistent performance for irrigation, drainage, and general water pumping needs.

Overview

Robust Diesel Water Transfer Solution

This diesel displacement pump is a high-performance solution designed for reliable water transfer in demanding environments. Engineered for efficiency, it supports essential operations such as irrigation, drainage, and general pumping tasks. The unit features a durable construction and a protective frame, ensuring stability and long-lasting operation for both stationary and portable field use.

Performance Metrics

Operational Capabilities

- High flow rate capacity
- Versatile water source handling
- Engine-powered displacement operation

Primary Applications

Irrigation, Drainage, General Water Transfer

Design and Build

Build Quality

Durable Construction • Sturdy Protective Frame • Portable Design
