

Diesel Welding Generator 2kW 3kW 5kW

This diesel welding generator provides both welding and electrical power generation. It features a diesel engine for reliable performance and is equipped with welding output suitable for various welding applications.

Product Overview

Dual-Function Power and Welding Solution

This industrial-grade generator provides a versatile dual-function solution, combining robust electrical power generation with high-performance welding capabilities. Powered by a high-performance diesel engine and featuring a 100% copper motor, it is engineered for reliability in demanding on-site environments. The unit supports various electrode diameters and a broad welding current range, making it an ideal choice for construction, remote operations, and emergency power requirements.

Performance Metrics

Welding Current

50 A

Minimum Current

250 A

Maximum Current

Power Output Options

- 2
- 3
- 5

Technical Details

Electrode Diameter Range	1.6mm to 6mm
Motor Construction	100% Copper Motor
