

Diesel Welding Generator KDE5000EW

This diesel generator provides both welding and electrical power simultaneously. Its design allows for easy maneuverability and wide application in various settings.

Product Overview

Dual-Function Performance

This diesel welding generator provides a versatile solution by combining power generation and welding capabilities into a single, compact unit. Engineered for high-quality output, it utilizes IGBT and PWM technology to ensure stable, non-fluctuating welding currents for superior results. Designed with portability and efficiency in mind, the unit features a rugged frame with castors, making it an ideal choice for demanding on-site construction and emergency power applications.

Technical Specifications

Welding Features

- Simultaneous welding and power generation
- IGBT and PWM waveform control
- Stable non-fluctuating current
- Wide current regulation range for various rod types

Key Metrics

12 V

DC Output Voltage

8.3 A

DC Output Current

Design & Utility

Build Quality

Lightweight, Compact, Durable Castors, Automatic Voltage Regulator, Damper Winding

Compliance & Standards

Quality Standards

ISO 9001
