

Digital Content Management Software

This software manages and distributes digital content across various platforms. It supports user management, conditional access, and mobile payments.

System Overview

Digital Content Management Solution

This comprehensive digital content management software provides a centralized architecture for secure media distribution and user administration. The system integrates advanced conditional access, multi-platform asset management, and seamless support for broadcast and mobile network infrastructures. Designed for scalability, it enables secure content encoding, data serving, and flexible payment gateway integration to facilitate efficient media workflows.

Core Modules

Supported Modules

- User Management System
- Conditional Access System (CAS)
- Media Asset Management (MAM) Platform
- Broadcast Infrastructure
- Mobile Payment Gateway
- Data Servers

Technical Infrastructure

Infrastructure Integration

Component	Function
EMMG/ECMG	Access Control Management
Multiplexer	Signal Transmission
Payment Gateway	Financial Transaction Processing
Broadcast Network	Distribution Channel

Technical Capabilities

Content Encoding, Data Scrambling, Signal Multiplexing, Bidirectional CA Server, Internet/Mobile Network Integration
