

# Digital Control Metal Sheet Folder and Slitter

This machine is designed for bending, folding, slitting, straightening and leveling metal sheets. It features a digital control system for accurate and repeatable operations.

## ADDITIONAL IMAGES

## Overview

### Precision Metal Folding & Slitting

This digital control machine integrates advanced electromechanical and hydraulic systems to streamline metal sheet processing. Designed for versatility, it automates back-stop, clamping, and folding operations to ensure high precision and repeatability. It is an essential tool for steel construction applications, including roofing, door openings, and window frame production.

## Technical Capabilities

### Common Profiles

- V-shapes
- U-shapes
- Custom profiles

### Maximum Material Thickness

1.5 mm

### Supported Operations

Bending, Folding, Slitting, Straightening, Leveling

## Control & Certification

### Certifications & Standards

CE • ISO 9001 • UKAS

### Control System

CNC Digital Control
