

# Digital Counting Register

This digital counting register accurately counts and displays events. It features a clear numerical display and robust construction for reliable performance.

## Product Overview

### Versatile Digital Counting Register

The digital counting register is a high-performance instrument designed for the precise counting and display of events in industrial and laboratory environments. It combines a robust mechanical counter mechanism with advanced electronic circuitry to ensure high accuracy and reliable signal processing. The device features a dust-proof closed cycle design and a compact form factor, making it easily integrable into existing automation or data logging setups.

## Technical Specifications

### Construction Materials

- Polycarbonate Basic Frame
- Polycarbonate Numeral Wheel
- Polyformaldehyde Gear

Screening Cover Thickness	0.5 mm
---------------------------	--------

## Installation and Design

Mounting Configuration	Upper side mounting, Lower side mounting
Motor Installation	Lateral

## Performance Features

### Key Capabilities

Dust-proof • High Stability • High Accuracy • Customizable
