Overview

High-Efficiency Kitchen Water Heating

This digital display water heater is specifically designed for kitchen applications, combining a compact form factor with advanced energy-saving technology. Featuring a 5-star BEE standard rating and a dedicated ECO mode, it ensures top-tier energy efficiency for professional and residential environments. The unit is equipped with a modern LED interface and versatile operating modes to provide precise control over water temperature and scheduling.

Technical Construction

Advanced heating element featuring anti-bacterial and self-cleaning properties to prevent scaling and ensure durability.

The single weld line design significantly reduces leakage points and is built with thickened SPCC material for high-pressure environments.

Heating Element Features

- Anti-scale technology
- Stable performance
- Anti-bacterial properties
- Self-cleaning design
- High corrosion resistance

Blue Diamond Inner Tank

The tank features an exclusive single weld line design made from customized thickened SPCC material, specifically engineered for high-rising applications. By reducing weld jointing by 50% and weld length by 75%, this design reduces leakage risk by over 67% compared to traditional triple-weld tanks.
