Overview

Precision Grip Strength Measurement

This digital hand dynamometer is an essential tool for health monitoring and physical therapy assessment. It features a high-precision sensor capable of measuring grip strength up to 90kg with a 0.1kg resolution. Designed for user convenience, it includes data storage for personal records and allows for easy comparison between current and previous measurements.

Technical Specifications

Maximum Capacity	90 kg
Measurement Resolution	0.1 kg
Supported Units	kg, lb

Features

Key Features

- Real-time grip power measurement
- Grip power level display
- Personal data storage
- Grip power record history
- Comparative analysis of current vs. last record

Design Highlights

Large LCD Display • Adjustable Grip Handle • Ergonomic Design

Performance Overview

90 kg Max Capacity	198 lb Max Capacity
