

Digital Headend Broadcasting Equipment

This digital headend equipment is designed for professional broadcasting applications. It offers reliable signal processing and distribution for high-quality video and audio transmission.

Overview

Professional Broadcasting Solution

This high-performance digital headend equipment is engineered for demanding professional broadcasting applications. It features advanced modulation and demodulation capabilities, ensuring reliable signal processing and high-quality video and audio transmission. Designed for seamless integration, the unit is optimized for rack mounting in cable TV networks, satellite broadcasting, and professional video distribution systems.

Technical Specifications

Model Number	DVD-TKS3223
Form Factor	Rack-mountable

Key Features

Core Capabilities

- Advanced modulation
- Advanced demodulation
- Reliable signal processing
- Signal distribution

Application Areas	Cable TV Networks, Satellite Broadcasting, Video Distribution Systems
-------------------	---

Interface & Indicators

Front Panel Indicators

Power • Error • Lock • DVB

Output Interfaces

- ASI-OUT
