

Digital Programmable Timer Switch

This digital programmable timer switch automatically controls electrical circuits using a schedule defined by the user. Daily and weekly programming are supported, and the device features a digital display and a manual override.

Overview

Professional Digital Timer Control

The TH-190 is a versatile digital programmable timer switch engineered for the precise automatic control of electrical circuits. It offers flexible daily and weekly scheduling options, making it ideal for home automation, energy management, and security system applications. With a robust design and intuitive interface, this device provides reliable performance and ease of use in diverse indoor settings.

Technical Specifications

Operational Features

- Manual override function
- Energy-saving sleep mode
- Clear digital display
- Protective front cover

Programming Modes	Daily, Weekly
Housing Material	Durable plastic
Installation Type	Indoor

Application

Primary Applications

Home Automation • Energy Management • Security Systems • Lighting Control
