

Digital Pulse Battery Charger with Four Independent Outputs

This pulse charger uses a dedicated control chip. It can simultaneously charge four 12V or 16V batteries.

Product Overview

Digital Pulse Charging Technology

This advanced digital pulse battery charger is engineered specifically for demanding environmental protection applications. Featuring four independent outputs, it provides precise, multi-stage charging control to optimize battery health and performance. The system utilizes a patented charging technology, ensuring reliability and efficiency for professional engineering environments.

Technical Details

Model Number	CD-1605K
Independent Outputs	4
Patent Number	ZL 01 1 17645.8

Applications

Primary Use Case	Environmental protection engineering
------------------	--------------------------------------

Features

Charging Method	Digital Pulse, Multi-stage Charging
-----------------	-------------------------------------
