Overview

Professional Satellite Alignment Tool

This digital satellite finder is a high-precision handheld device engineered for the efficient installation and alignment of satellite dishes. It provides real-time signal analysis, including spectrum and constellation displays, ensuring optimal reception quality for both professional technicians and DIY installers. Featuring a user-friendly interface and robust portable design, it simplifies complex satellite setup tasks in various field environments.

Key Features

Advanced Functions

- Spectrum Analysis
- Real-time Constellation Display
- Multi-lingual OSD
- User-friendly UI

Supported Standards

DVB-S, DVB-S2, Unicable LNB, DISEqC1.0, UASLS, 0/22KHz

Hardware & Connectivity

Handheld satellite meter interface with signal quality display and navigation buttons.

PACKING AND DELIVERY

Professional packaging and secure shipping preparation for reliable delivery.

Interface & Connectivity

- USB 2.0 (Software update & backup)
- Signal Input
- DC Input

Physical Features

Color LCD Screen • Built-in Compass • Highlight LED Flashlight • Rechargeable Battery
