

Digital Satellite Receiver with USB

This digital satellite receiver is designed for decoding satellite television and radio signals. It supports DVB-S standards and features a USB port for multimedia playback and software updates.

Product Overview

High-Performance Satellite Reception

The SD-04 digital satellite receiver offers a robust solution for accessing satellite television and radio broadcasts with full DVB-S (MPEG2) compliance. Designed for efficiency, it supports a vast library of 5,000 channels and up to 64 individual satellites. With user-friendly features like multi-language OSD, EPG support, and integrated USB functionality, this receiver provides a versatile and intuitive experience for professional and residential users.
