

Digital Satellite Receiver

This digital satellite receiver is designed for free-to-air satellite signal reception. It features a four-digit LED display and front panel buttons for easy menu navigation.

Product Overview

High-Performance Digital Satellite Receiver

This Digital Satellite Receiver, powered by the GX6101 chipset, is engineered for reliable Free-to-Air (FTA) satellite signal reception. It features an intuitive front panel interface with dedicated buttons for menu navigation, channel selection, and volume control, complemented by a clear four-digit LED display. Designed for stability and ease of use, this unit provides a robust solution for professional satellite broadcasting needs.
