

# Digital Satellite TV Receiver

Digital satellite receiver designed for receiving and decoding digital television signals. It supports DVB-T2 standards for digital video broadcasting.

## Product Overview

### Professional Digital Satellite Solution

This high-performance digital satellite receiver is engineered for reliable decoding of digital television signals. Designed to meet modern broadcasting standards, it offers a seamless viewing experience with intuitive channel control. Its compact design and robust technical architecture make it an ideal choice for professional satellite signal reception environments.

## Technical Specifications

### Broadcasting Standard

DVB-T2

### Model ID

28037J

### Series Class

4000

## Key Features

### Interface Features

- Front panel display
- Dedicated channel selection buttons
