

# Digital Satellite TV Receiver

This digital satellite receiver is engineered for receiving digital satellite television and radio signals. The device supports DVB standards and provides digital audio and video output.

## Product Overview

### Professional Satellite Reception

This digital satellite TV receiver is fully compliant with DVB-S (MPEG2) standards, ensuring reliable signal reception for home entertainment systems. It offers a high-capacity memory space capable of storing up to 5000 channels and 64 satellites. With a user-friendly interface and energy-efficient standby power consumption of less than 1W, it provides a seamless and cost-effective viewing experience.

## Technical Specifications

### Standby Power

**1 W**

Standby Power Consumption

Compliance	DVB-S, MPEG2
Max Channels	5000
Satellite Memory	64

## User Experience

### Key Features

- Multi-language OSD
- User-friendly UI
- Teletext support
- EPG support
- Favorite Channels management
