

Digital Terrestrial Television Receiver

Receiver is engineered for radio and TV broadcasting applications. It supports digital terrestrial television (DTH) standards and offers advanced decoding capabilities.

Product Overview

Professional DTH Receiver

This high-performance digital terrestrial television receiver is engineered for robust radio and TV broadcasting applications. Utilizing advanced chip-down architecture, it ensures reliable signal processing and optimal decoding performance in demanding professional environments. The unit features integrated smart card support, facilitating secure content decryption and versatile operational capabilities for diverse broadcasting infrastructures.

Technical Specifications

Security Features

- Integrated smart card insertion slot
- Chip-down architecture for secure processing

Supported Standards	DTH, Digital Terrestrial Television
Model Identifier	600-CADAS-S
