

Digital Terrestrial Television Tuner Module

This compact digital terrestrial television tuner module is designed for integration into television sets and set-top boxes. It features RF signal reception, demodulation, and channel selection.

Product Overview

High-Performance DTT Reception

The Digital Terrestrial Television (DTT) Tuner Module is a compact, high-efficiency solution engineered for seamless integration into modern television sets and set-top boxes. It provides robust RF signal reception, precise demodulation, and reliable channel selection capabilities. Designed for versatility, this module supports a wide array of digital terrestrial television standards to ensure compatibility across diverse broadcasting environments.

Technical Specifications

Core Functions

- RF signal reception
- Digital demodulation
- Channel selection

Design Characteristics

Compact Form Factor • Integration Ready • DTT Standard Support

Model Number

DTT-1B/111

Recommended Applications

Television Sets, Set-Top Boxes, Digital Receivers
