

Digital Terrestrial TV Receiver

This digital TV receiver is designed for terrestrial broadcasts, supporting various video and audio formats. It features an electronic program guide (EPG), parental control, and multiple output options for connecting to different display devices.

Overview

Digital Terrestrial Receiver

The DVT-4801 is a compact and reliable digital terrestrial receiver designed for standard definition broadcasting. Featuring MPEG-2 decoding capabilities, this unit offers a straightforward free-to-air (FTA) experience for users. Its 130mm plastic housing ensures a space-saving footprint, while versatile connectivity options like SCART output provide broad compatibility with various display devices.
