

Digital Terrestrial TV Receiver FTA Version

This digital terrestrial receiver is designed for receiving free-to-air (FTA) digital television broadcasts. The receiver supports various digital TV standards and provides high-quality audio and video output.

Overview

Compact Digital Terrestrial Receiver

The DVT-5001 is a reliable digital terrestrial receiver designed for accessing free-to-air (FTA) broadcasts without the need for a subscription. Featuring a compact 130mm plastic housing, it integrates seamlessly into home entertainment setups while providing standard definition MPEG-2 decoding. This unit offers essential connectivity through SCART output and supports software upgrades to ensure continued performance.
