

Digital TV Antenna

This TV antenna supports DVB-T, DVB-T2, and DTMB standards. It operates within 470-860 MHz, featuring 7-10 dB gain, 75 ± 3Ω output impedance, and a 1.2 VSWR.

Product Overview

Professional Digital TV Reception

This high-definition digital TV antenna is engineered for reliable signal reception across a wide frequency spectrum. Compatible with DVB-T, DVB-T2, and DTMB broadcasting standards, it ensures stable and clear video quality for professional applications. Its robust design features a low VSWR and standard impedance, making it an ideal choice for digital television integration.

Performance Metrics

Gain
