

Digital TV Modulator for Broadcast Applications

This professional-grade digital TV modulator is designed for high-quality signal processing and distribution. It supports various input formats and offers flexible configuration options for optimal performance in broadcast and professional video applications.

Product Overview

Professional Digital TV Modulation

This digital TV modulator is engineered for high-quality signal processing and distribution in professional broadcast environments. It supports a wide array of input formats and offers flexible configuration options to ensure optimal performance. With advanced modulation schemes and robust error correction, the device provides reliable, stable operation for demanding video applications.

Technical Specifications

Key Features

- Advanced modulation schemes
- Robust error correction
- Comprehensive monitoring capabilities
- Flexible input configuration

Model Number	DVD-TKS319
Application	Broadcast, Professional Video, Signal Distribution

Indicators

Front Panel Indicators

Power • Lock • Alarm
