

# Digital TV Signal Generator

The test signal generator is a digital television signal generator produced exclusively for debugging purposes. It has HDTV and SDTV test graphics card with multiple output options including VGA, YPbPr, CVBS, S-video, and AUDIO.

## Overview

### Professional Digital TV Signal Generator

This digital television signal generator is engineered specifically for debugging and testing applications. It supports over 100 HDTV and SDTV test graphics, providing a versatile solution for calibration and quality control. With a user-friendly interface and customizable user groups for frequently used signals, it offers a high-performance, cost-effective tool for technical environments.

## Technical Specifications

### Supported Resolutions

- 640 × 480
- 1280 × 720
- 1920 × 1080

Output Interfaces	VGA, YPbPr, CVBS, S-video, AUDIO
Test Graphics Capacity	100 graphics

## Features

### Storage Options

Internal Storage • External Storage

### Interface Highlights

- Customizable user signal groups
- LCD display for signal selection
- Easy-to-operate menu system

### Performance Profile

**100 patterns**
