

Digital TV Tuner Module

Tuner module designed for digital television reception. It features dual F-connectors for antenna input and incorporates advanced demodulation and decoding technologies.

Product Overview

High-Performance Digital TV Reception

This Digital TV Tuner Module is engineered for high-performance television signal reception, supporting both terrestrial and cable standards. Its compact design allows for seamless integration into electronic devices such as set-top boxes and television sets. Equipped with advanced demodulation and decoding technology, it ensures clear, reliable signal processing for professional-grade applications.

Technical Specifications

Key Technologies

- Advanced Demodulation
- Digital Decoding
- Compact Integration Design

Model Identifier	SSQ-TARK-LA28
Antenna Inputs	2 F-connectors
Supported Signal Types	Terrestrial, Cable
