

Digital Ultrasonic Cleaner with Heater

This ultrasonic cleaner uses high-frequency sound waves to create cavitation bubbles in a cleaning solution, effectively removing dirt and grime. The machine features a digital display and a stainless steel tank for durability.

Product Overview

Professional Ultrasonic Cleaning Solution

The Digital Ultrasonic Cleaner with Heater is a high-performance device designed for efficient removal of dirt, grime, and contaminants from intricate items. Featuring a durable stainless steel tank, it utilizes advanced cavitation technology to reach deep into hard-to-access surfaces. With integrated heating and adjustable cleaning modes, this unit provides a versatile solution for jewelry, optics, dental tools, and electronic components.
