

Digital Uninterruptible Power Supply

These digital uninterruptible power supply (UPS) systems are engineered for safeguarding critical infrastructure. The modular UPS units provide scalable power solutions enhanced with advanced monitoring and control functionalities.

Product Overview

High-Performance Digital UPS

This digital uninterruptible power supply (UPS) provides robust critical infrastructure protection for sensitive electronic equipment. Designed for scalability and reliability, it features a modular architecture that supports hot-swappable components for seamless maintenance and improved system redundancy. It is an ideal power backup solution for demanding environments such as data centers, telecommunications networks, and industrial facilities.

Key Features

System Capabilities

Modular Design, Hot-swappable, Redundant Power, Digital Monitoring

Target Applications

Primary Applications

- Data Centers
- Telecommunications
- Industrial Facilities
- Critical Infrastructure Protection
