

DIN 125 Flat Washer

These flat washers conform to DIN 125 standards, ensuring quality and reliability. They provide a smooth bearing surface, effectively distributing the load of a fastener over a wider area.

Product Overview

Reliable Fastening Solutions

These high-quality flat washers are manufactured strictly according to DIN 125 standards. Designed to provide a smooth bearing surface, they effectively distribute the load of a fastener over a wider area, preventing damage to the surface material. They are an essential component for various industrial and construction applications requiring durable and secure fastening.

Technical Standards

Standard	DIN 125
Component Type	Flat Washer

Application & Features

Primary Function	Load distribution
Key Benefits	Load Distribution, Surface Protection, Standardized Fit
