

DIN Rail Mounted Terminal Blocks and Connectors

These terminal blocks and connectors are designed for mounting on DIN rails. They provide a modular and organized solution for electrical connections in various control systems.

Product Overview

Professional DIN Rail Connectivity Solutions

These DIN rail mounted terminal blocks and connectors are engineered for high-density electrical wiring and control system integration. Designed for modularity, they facilitate organized and efficient cable management within industrial panels and enclosures. This system supports various terminal types to ensure reliable, secure connections for complex electrical infrastructures.

Technical Specifications

Key Features

- Modular design for custom configurations
- High-density panel integration
- Secure mechanical locking
- Integrated safety warning labels

Application Suitability

Control Panels • Industrial Automation • Electrical Enclosures

Mounting Style

DIN Rail

Component Types

Terminal Blocks, Connectors, Accessories
