

DIN Standard Gate Valve DN15-DN600

This industrial gate valve controls the flow of fluids in pipeline systems. It is constructed from durable materials and complies with DIN standards.

Product Overview

DIN Standard Gate Valve

This industrial-grade gate valve is engineered to provide reliable flow control within complex pipeline systems. Designed in strict accordance with DIN standards, it ensures dimensional accuracy and consistent performance across a wide range of operational environments. Its robust construction and flanged connection design make it a secure and durable solution for demanding on/off control applications.

Technical Specifications

Pressure Rating

PN16

Nominal Diameter (DN)

DN15 - DN600

Standards

DIN Standard, EN1092-1

Connection Type

Flanged

Application

On/Off Flow Control
