

DIN Standard Y-Strainer Valve DN 15-400

This Y-strainer valve is a filtration solution designed for industrial applications. It effectively removes debris and particles from fluids, protecting downstream equipment and ensuring optimal system performance.

Overview

DIN Standard Y-Strainer Valve

The DIN Standard Y-Strainer Valve is a robust and reliable filtration solution designed for industrial applications. This valve effectively removes debris and particles from fluids, protecting downstream equipment and ensuring optimal system performance. With a Y-pattern design that minimizes pressure drop, it is suitable for a wide range of fluids, including water, oil, and gas.

Technical Specifications

Design Standard

DIN

Size Range (DN)

DN 15 - DN 400

Valve Type

Y-Strainer

Key Features

Performance Benefits

- High corrosion resistance
- Wear resistant construction
- Minimized pressure drop
- Maximized filtration efficiency

Compatible Fluids

Water, Oil, Gas
