

DIN Standard Y-Strainer Valve DN 15-50

This DIN standard Y-strainer valve is designed to filter debris and particles from fluid systems. Its Y-pattern minimizes pressure drop while effectively capturing solids, protecting downstream equipment.

Product Overview

Industrial Y-Strainer Overview

The DIN Standard Y-Strainer is a robust industrial valve designed for filtering debris and particles from fluid systems. Its Y-pattern design minimizes pressure drop while effectively capturing solids, protecting downstream equipment from damage. Compliant with DIN standards, this strainer offers precise dimensions and compatibility with various piping systems, making it ideal for water treatment, chemical processing, and HVAC applications.

Technical Specifications

Standard
DIN

Size Range (DN)

DN 15 - DN 50

Product Type

Y-Strainer Valve

Applications

Typical Applications

Water Treatment, Chemical Processing, HVAC Systems
