

DIN6899 Form B Wire Rope Thimble

This metal thimble protects wire rope or synthetic rope eyes from wear. Conforming to DIN 6899 Form B standards, it enhances rope durability in lifting, rigging, and marine applications.

Product Overview

DIN 6899 Form B Wire Rope Thimble

The DIN 6899 Form B thimble is a high-performance metal fitting designed to protect wire or synthetic rope eyes from abrasion and deformation. By providing a solid surface for the rope loop to bear against, it prevents crushing and kinking when used with shackles, hooks, or other rigging hardware. This essential fitting extends the service life of ropes in demanding lifting, rigging, and marine environments.

Technical Specifications

Standard	DIN 6899 Form B
Key Features	Abrasion Resistant, Prevents Kinking, Corrosion Resistant, Prevents Fraying

Applications

Common Use Cases

- Lifting operations
- Rigging systems
- Marine applications
