

Direct-Coupled Air Compressor

This direct-coupled air compressor is designed for efficient and reliable performance. It features a robust motor directly connected to the pump, minimizing power loss and maximizing air delivery.

Product Overview

High-Efficiency Direct-Coupled Air Compressor

This direct-coupled air compressor is engineered for efficient and reliable performance in demanding environments. By featuring a robust motor directly connected to the pump, it minimizes power loss and maximizes air delivery output. It includes a durable integrated tank for consistent compressed air storage, making it an ideal solution for powering pneumatic tools, tire inflation, and various general-purpose industrial applications.

Technical Specifications

Design Type

Direct-Coupled

Safety & Compliance

Safety Features

Pressure Relief Valve, Thermal Overload Protection

Applications

Common Applications

- Pneumatic tool operation
- Tire inflation
- General-purpose compressed air supply
