

Direct Drive Drilling and Milling Machine

This direct drive drilling and milling machine is designed for metalworking applications. It features a robust construction and a direct drive system for accuracy and efficiency in drilling and milling operations.

Product Overview

Precision Direct Drive Drilling and Milling

This direct drive drilling and milling machine is a versatile, high-precision tool engineered for metalworking applications ranging from prototyping to small-batch production. Featuring a robust construction and an advanced direct drive system, it delivers superior accuracy, enhanced torque, and quiet operation. Its compact footprint makes it an ideal solution for small workshops, toolmaking facilities, and educational institutions.

Technical Specifications

Drive System

Direct Drive • High Torque • Low Noise

Control Features

- Digital spindle speed display
- Digital depth monitoring
- Integrated control panel

Design & Utility

Structural Features

- Robust machine construction
- Stable base cabinet included
- Compact footprint

Ideal Environments

Small Workshops, Educational Institutions, Prototyping Labs, Toolmaking
