

Direct Fuel Injected Two-Stroke Outboard Motor

This direct fuel injected (DFI) two-stroke outboard motor is known for its fuel efficiency and performance. The engine features a robust design, providing reliable power for various boating applications.

Overview

High-Performance Outboard Power

This direct fuel injected (DFI) two-stroke outboard motor is engineered for efficiency and reliability in diverse boating environments. Its advanced fuel injection system optimizes combustion, resulting in smoother operation and reduced emissions compared to traditional two-stroke designs. Built for durability and ease of maintenance, this motor serves as a dependable solution for both recreational and professional marine applications.
