

Directional Wireless Communication Antenna

This is a directional antenna designed for wireless communication applications. It features a mounting bracket and coaxial cable for connecting to a radio or other device.

Overview

High-Performance Directional Antenna

This directional wireless communication antenna is engineered for reliable signal transmission and reception in specialized wireless applications. Featuring a robust cylindrical design and an integrated mounting bracket, it ensures stable positioning and optimal performance in demanding environments. The unit comes pre-equipped with a high-quality coaxial cable for straightforward integration into existing radio or communication systems.

Physical Characteristics

Color	Gray
Design Features	Directional, Cylindrical Element, Triangular Mounting Bracket

Connectivity

Connection Type	Coaxial Cable
Mounting Hardware	Yes
