Overview

Professional Soil Preparation

This 2700mm working width disc harrow is a robust agricultural implement engineered for superior soil preparation and seedbed creation. Designed to operate in extreme conditions, it efficiently handles superficial ploughing, clod shattering, and the incorporation of organic matter. Its versatile design allows for both mounted and trailed configurations, making it a flexible solution for primary and secondary tillage needs.

Technical Specifications

Working Width	2700 mm
Configuration	Mounted, Trailed
Frame Material	Welded Steel
Finish	Corrosion-resistant yellow paint

Operational Capabilities

Key Benefits

- Superficial ploughing and clod shattering
- Soil aeration and weed elimination
- Root breaking
- Burial of organic substances and remains
- Adjustable disc angles for tillage control

Tillage Performance

2700 mm

Working Width
