

# Disc Harrow for Soil Tillage

This machine is suitable for pulverizing and loosening clods after plowing, and for planning land before sowing on cultivated land. It facilitates soil and fertilizer mixing and clears away plant stumps.

## ADDITIONAL IMAGES

## Overview

### Professional Soil Tillage Solution

This robust disc harrow is engineered for efficient soil preparation, ideal for pulverizing clods after plowing and leveling land before sowing. Its durable structure ensures it can handle demanding agricultural tasks, including mixing fertilizer into the soil and clearing crop residue. Designed for ease of operation and maintenance, it provides a reliable solution for modern farming needs.

## Technical Specifications

### Tractor Horsepower Compatibility

**50 HP**  
Min HP

**70 HP**  
Max HP

### Key Features

- Adjustable disc angles for soil control
- Notched disc blades for aggressive cutting
- Robust frame construction
- Suitable for seedbed creation

### Material Composition

Carbon Steel, Hardened Steel

## Operational Details

### Primary Functions

Soil Pulverization • Residue Clearing • Fertilizer Mixing • Land Leveling
