

# Disc Harrow - Soil Preparation Implement

This disc harrow is a robust agricultural implement designed for soil preparation. Featuring sturdy, independently mounted discs, it efficiently cuts through crop residue and breaks up clods, creating a smooth seedbed.

## Overview

### 1JBX Series Disc Harrow

The 1JBX series disc harrow is a robust agricultural implement engineered for high-performance soil preparation. Featuring sturdy, independently mounted discs, it efficiently cuts through tough crop residue and breaks up clods to create an ideal seedbed. Built with high-strength steel, this equipment ensures durability and reliable performance during both primary and secondary tillage operations.

## Technical Features

### Adjustment Capabilities

- Adjustable disc angles
- Variable soil penetration
- Adjustable soil mixing

Construction Material	High-strength steel
-----------------------	---------------------

## Application

### Key Benefits

Improved crop establishment • Optimized soil structure • Increased yield potential

Tillage Type	Primary Tillage, Secondary Tillage
--------------	------------------------------------
