

# Dishwasher Heating Element - Double U-Shape, Corrosion-Resistant Alloy

This tubular heating element is specifically designed for dishwashers. It features a double U-shaped configuration for efficient heat distribution and is constructed from a corrosion-resistant metal alloy.

## Product Overview

### High-Efficiency Heating Solution

This tubular heating element is engineered specifically for dishwasher applications, ensuring reliable performance and consistent heat distribution. Featuring a robust double U-shape design, it maximizes thermal efficiency within the wash chamber. Constructed from a high-quality, corrosion-resistant metal alloy, this component is built to withstand harsh detergent environments and extended operational cycles.

## Technical Specifications

Design Configuration	Double U-Shape
Material Composition	Corrosion-Resistant Alloy, Metal Alloy

## Installation & Compatibility

Mounting Type	Integrated Mounting Flange
Connection Interface	Electrical Terminals

## Key Features

### Performance Highlights

- Double U-shape for efficient heat distribution
- Corrosion-resistant construction
- Integrated mounting flange for secure installation
- Standardized electrical terminals
