

Dishwasher Motor Replacement Part

This dishwasher motor is designed for household kitchen appliances. It drives the water pump to ensure efficient cleaning.

Product Overview

High-Performance Dishwasher Motor

This dishwasher motor is a critical replacement component designed for household kitchen appliances. Engineered for durability and reliability, it drives the water pump system to ensure consistent and efficient cleaning performance. Its robust construction features multiple mounting points and standard electrical connectors, allowing for straightforward integration into existing appliance electrical systems.

Technical Details

Installation Features

- Multiple mounting points
- Standard electrical connectors

Application	Household Kitchen Appliances
Primary Function	Water pump drive
Design Attributes	Robust Design, White Housing, Visible Rotor
