

DLLA155P863 Fuel Injection Nozzle

This fuel injection nozzle is designed for common rail injector systems. Diesel engine performance relies on fuel atomization, which is influenced by nozzle geometry.

Overview

High-Precision Diesel Injection

The DLLA155P863 is a high-quality fuel injection nozzle designed for common rail systems, ensuring optimal fuel atomization and spray processes. Engineered for multi-cylinder diesel engines, it plays a critical role in enhancing engine performance and reducing emissions by precisely sealing the combustion chamber. This steel-bodied component is a reliable replacement part built to meet stringent international quality standards for durability and efficiency.

Technical Specifications

Unit Weight

0.04 kg
Net Weight

Body Material	Steel
Fuel Type	Diesel
Cylinder Configuration	Multi-cylinder
Carburettor Type	Downdraft
HS Code	84099199

Quality & Compliance

Certifications	ISO9001, TS16949, ISO9001: 2008, SGS
Warranty	6 Months

Logistics & Identification

Transport Package	Diversified Neutral Packing
-------------------	-----------------------------
