

DN15-300 Globe Valve

This industrial globe valve is designed for flow regulation in piping systems. It features a handwheel actuator, flanged connections, and robust construction.

Product Overview

Industrial Globe Valve Overview

This industrial globe valve is engineered for precise flow regulation within demanding piping systems. Designed to comply with established GOST standards, it ensures reliability and durability in professional industrial environments. The unit features a standard handwheel actuator and robust flanged connections to facilitate seamless integration and operational control.
