

Domestic Constant Temperature Gas Water Heater

This gas water heater provides a stable and consistent water temperature for domestic use. It features an intelligent control system and an inverter fan with a proportional valve for fuel efficiency.

Product Overview

High-Efficiency Constant Temperature Water Heating

This advanced domestic gas water heater is engineered to provide a consistently stable water temperature, eliminating the fluctuations common in traditional models. Built with a forced smoke exhaust structure and an inverter turbo fan, it ensures safe operation by drawing air from and venting smoke to the outside via a coaxial chimney. The unit features an intelligent PCB control system and a 304 stainless steel combustion chamber, delivering heating efficiency exceeding 90% for a reliable and comfortable user experience.

Performance & Technical

Available Capacities

- 11L
- 13L
- 16L

Heating Efficiency

90 %

Efficiency

Exhaust Type

Smoke forced exhaust with inverter turbo fan

Safety & Construction

Safety Protections

Ignition Failure Protection • Anti-downwind Protection • Sealed Combustion Chamber

Key Materials

304 Stainless Steel

User Interface

Interface

Large LED display with touch control panel
