

Double-Acting Hydraulic Hand Pump

This double-acting hand pump is designed for hydraulic applications requiring efficient and reliable manual operation. It delivers fluid on both the up and down strokes, maximizing efficiency.

Overview

High-Efficiency Hydraulic Power

This double-acting hydraulic hand pump is engineered for demanding industrial applications, providing reliable power for double-acting cylinders and various hydraulic tools. Featuring a robust design and two-speed operation, it delivers efficient fluid displacement on both up and down strokes to maximize productivity. With a maximum operating pressure of 70 MPa (700 bar), this pump offers the high-pressure capabilities required for heavy-duty lifting, pressing, and maintenance tasks.

Technical Specifications

Maximum Pressure	70 MPa
Pump Type	Two-Speed
Valve Configuration	Double-Acting, Pressure Release Valve, 4-Way Valve Available (Select Models)

Performance Data

Model Performance Comparison

Model	Usable Oil (cm ³)	Weight (kg)
P804D	4000	24
P806D	6000	25
P808D	8000	27
P1010D	10000	30
P77D	2200	15
P84	2200	19

Applications

Common Applications

- Hydraulic cylinders
- Industrial presses
- Automotive maintenance
- Portable hydraulic power systems
