

Double Chamber UV and Warm Light Sterilizer

This sterilizer features double chambers with individual sterilization systems. The upper chamber uses blue light sterilization, and the lower chamber uses warm light, both with electronic controls and digital displays.

Product Overview

Dual-Function Sterilization System

This double chamber unit offers a specialized approach to sterilization by utilizing distinct light technologies in each compartment. The upper chamber is equipped with a blue light sterilization system, while the lower chamber provides a warm light environment. Designed for professional use, the unit features electronic controls and a digital display for precise operational monitoring.
