

Double Diaphragm Pump for Industrial Applications

This double diaphragm pump is designed for a wide range of industrial applications. It features a compact design with a top-mounted accumulator to dampen pressure fluctuations.

Product Overview

Industrial Double Diaphragm Pump

The BDP series double diaphragm pump is a high-performance solution engineered for demanding industrial fluid transfer requirements. It features an integrated fluid regulator for precise pressure control and a stable, compact design suitable for professional applications. Built for consistency, this equipment ensures reliable flow rates and durability in various operational environments.

Performance Metrics

Performance Highlights

40 °C

Max Temperature

6.9 bar

Max Fluid Pressure

Technical Specifications

Operational Parameters

| Parameter | Value |
|-------------------|------------------|
| Fluid Regulator | Included (RPR-5) |
| Temperature Range | 5-40 °C |

Connection Types

Air Inlet: G1/4, Fluid Outlet: G1/4
