

Double Disc Wafer Check Valve

This valve is applied in oil fields, the chemical industry, coal mines, and for environmental protection. The compact wafer design allows easy installation between flanges.

Product Overview

Double Disc Wafer Check Valve

The Double Disc Wafer Check Valve is designed for industrial applications requiring reliable unidirectional flow control. Its compact wafer design allows for easy installation between standard flanges, making it an efficient solution for space-constrained piping systems. Constructed from durable materials, this valve minimizes pressure drop while effectively preventing backflow to protect downstream equipment.

Technical Specifications

Pressure Rating

150 LB

Pressure Class

Standards

API Standard

Design Type

Double Disc, Wafer, Swing Check, Double Door

Size

6 inch

Material Grade

CF8
